PROFESSIONAL SUMMARY

- **Championing cloud-native development and infrastructure-as-code (IaC):** Designed and delivered end-to-end CI/CD pipelines, custom container and Packer images, and production-grade Terraform/OpenTofu modules for the company's cloud environments — ensuring standardized, scalable, and repeatable deployments. Architected modules around DRY principles, prioritizing simplicity, elasticity, and reusability to enforce consistency across environments while maintaining stability at scale.
- **Scripting and automation:** Engineered scripts(Bash, PowerShell, Python) to automate environment configuration and business process workflows, eliminating manual intervention and significantly reducing operational overhead. Standardized complex multi-step processes into automated pipelines, minimizing critical errors and cutting processing time — directly lowering operational costs.
- **Enhancing Deployment Stability Posture:** Investigated and resolved systemic reliability gaps in Cloud PBX infrastructure through root-cause-driven standardization of Linux and Windows server configurations — eliminating configuration drift, safeguarding SLO/SLA commitments, and delivering MTTR improvements across production environments.
- **Cloud Networking:** Designed, orchestrated, and administered a production-grade, highly available IAM platform on private cloud infrastructure — spanning containerized multi-node deployment, automated failover, secrets management, and private network isolation — enforcing secure internal authentication and access control across all environments.

SKILLS

Cloud

AWS, Hetzner Cloud, VMware

Scripting & Automation

Bash, PowerShell, Python

Git

GitHub, GitLab

DevOps Pipelines

GitLab CI/CD

Database Administration

Microsoft SQL Server, PostgreSQL

Server Administration

Linux(Debian, Ubuntu), FreeBSD, Windows, IIS

IAM

Keycloak, Google IAM

Workflow-as-Code

n8n

Software Development

Java & Go

Infrastructure-as-Code

Ansible, Terraform/OpenTofu, Packer, Vagrant

Containerization & Orchestration

Docker, Portainer

Logging, Monitoring and Analysis

Grafana, Loki, Prometheus, Zabbix, Wireshark

PBX Administration

Asterisk & FreeSWITCH

Cyber Security Tools

NMAP, Burp Suite, Gobuster, SQLmap, Ghidra, GitLeaks

Secrets Management

SOPS, age

High Availability Tools

etcd, HAProxy, Patroni

LANGUAGES

Serbian — Native/Bilingual

English — Fluent

German — Conversational

B1

CERTIFICATES

Cyber Security SOC Analyst - Oktacron: Completed cybersecurity course with hands-on experience in SOC operations, malware forensics, cryptography, penetration testing, and Active Directory attacks.

Java Development - Poslovna Savrsenost: Developed Java back-end and web applications using Spring Boot, Hibernate, Thymeleaf, and Maven; with JUnit and Mockito testing.

EDUCATION

Electronics and Communication - Bachelor Studies, Visoka Skola Elektrotehnike i Racunarstva

2017 | Belgrade

PROFESSIONAL EXPERIENCE

Technical Engineer, Assist Digital S.p.A. / Converneo GmbH

08/2024 – Present | Belgrade, Serbia

- Owned end-to-end reliability of production application environments — conducting deep-dive incident investigations including failed request tracing, HAR analysis, performance profiling, and SQL blocking chain analysis to identify and remediate root causes of outages and degradation.
- Authored structured incident reports and root cause analysis documentation for production failures across PBX and infrastructure environments — establishing a post-incident process and maintaining an internal knowledge base for operational continuity.
- Executed security patch management across customer production systems — leveraging CrowdStrike to identify vulnerable services and prioritize remediation, applying OS and application-level patches within controlled maintenance windows, and performing post-patch validation through CrowdStrike reports to confirm full remediation and security clearance.
- Engineered automation scripts to eliminate operational toil — replacing manual environment configuration and business process workflows with reliable, repeatable automated pipelines, directly reducing overhead and minimizing critical errors.
- Instrumented and maintained observability stacks across production infrastructure using Grafana, Loki, Prometheus, and Zabbix — ensuring proactive detection of performance anomalies and infrastructure health visibility.
- Acted as a technical bridge between engineering and business stakeholders — consulting in customer-facing meetings to assess feasibility of application upgrades, document product gaps, and translate operational requirements into actionable engineering deliverables.
- Engineered and operated a production-grade, highly available IAM platform — spanning containerized multi-node deployment with PostgreSQL/Patroni, HAProxy, etcd, SOPS-based secrets management, and LDAP/Active Directory federation — enforcing secure internal authentication across all environments.
- Designed and delivered AI-augmented internal platform integrations spanning workforce management systems, ticketing platforms, and IAM infrastructure — implementing Keycloak group-membership-based access control to secure cross-platform automation and eliminate manual operational dependencies.
- Designed, provisioned, and maintained cloud infrastructure on Hetzner Cloud using OpenTofu/Terraform — architecting private network topologies, gateway configurations, and multi-node environments with production-grade IaC module standards.
- Managed and monitored customer-facing servers and services deployed on cloud infrastructure, maintaining performance baselines, uptime commitments, and SLA adherence across production environments.

Software Support Engineer - PS, NCR Voyix Corporation

11/2023 – 08/2024 | Belgrade, Serbia

- Served as a Professional Services engineer supporting enterprise-grade food distribution and ordering platform deployments across Desktop, Web, and Mobile — operating within high-availability, client-critical environments for large-scale US-based accounts.
- Monitored, profiled, and optimized end-to-end application performance across all three platform tiers, proactively identifying and remediating bottlenecks and reliability risks before client impact.
- Collaborated directly with the development team to maintain, patch, and upgrade application source code — translating client change requests into delivered improvements while preserving platform stability.
- Provided support for application security policies covering source code integrity and threat mitigation, ensuring compliance with security best practices across all upgrade and release cycles.

Technical Service Desk Specialist, NCR Voyix Corporation

02/2022 – 11/2023 | Belgrade, Serbia

- Delivered Tier 2 network and technical support across enterprise restaurant infrastructure for Tim Hortons operations throughout Canada and the USA, operating within strict SLA-driven environments.
- Diagnosed and resolved network incidents spanning Cisco switches, firewalls, and routers, as well as VMware SD-WAN deployments — minimizing downtime across large-scale multi-site restaurant operations.
- Partnered with network engineers to assess and improve network topology for enterprise sites, targeting secure, resilient, and optimized connectivity across distributed locations.
- Managed and triaged high-volume incident queues across corporate accounts, applications, and workstations — proactively identifying security vulnerabilities and consistently maintaining SLA compliance through structured prioritization and escalation.
